

# Turn your prestashop store into a PWA (progressive web app).

With this module for Prestashop you will be able to make your shop a PWA, that is to say that mobile and tablet users will be able to add your shop in the manner of a mobile application on their home screen.

The module will also improve the performance of your shop by caching the links visited by users who may even if they have added the site to their home screen to view it offline!

This is not all: the module will also allow you to offer your visitors to subscribe to push notifications, and you will understand, you will be able to send notifications to them (on mobile but also on desktop computers) via the free OneSignal service

In order to encourage your users to subscribe to notifications, the module has triggers that can alert them to changes in status of their order.

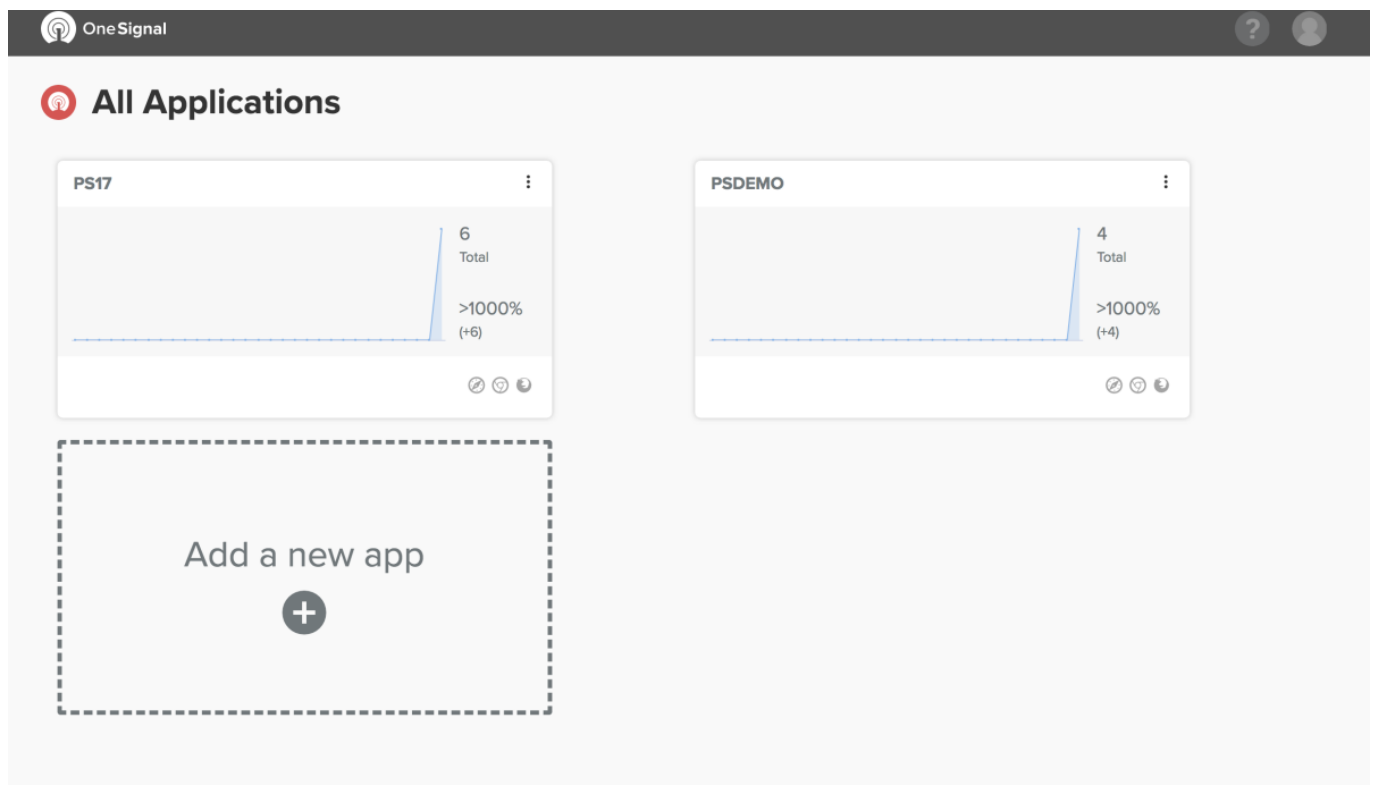

# Installation :

Load the archive from the prestashop back office.

go to <https://onesignal.com>

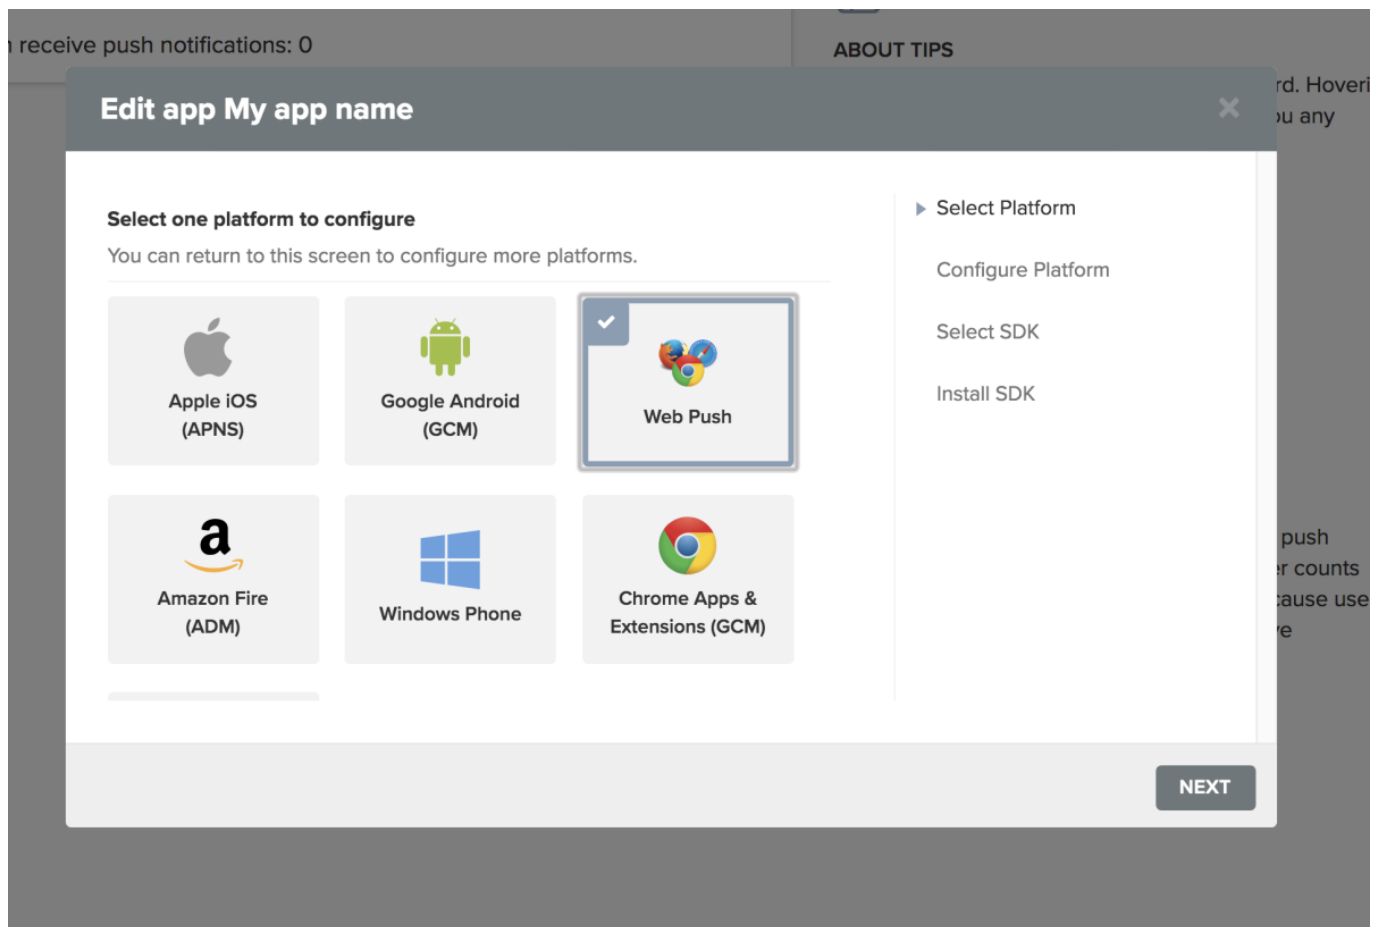

and create an account (you can log in with google or facebook to save time). Click on « add a new app » to add your application

Give it the name you want

Select « Web push » and click Next

Then fill out the following form in the order: The name of your shop, the URL of your shop and the logo you want to use

2 Site Setup

SITE NAME \*

SITE URL \*

DEFAULT ICON URL

+ UPLOAD

☐ My site is not fully HTTPS

**DEFAULT NOTIFICATION ICON URL**  
Icon dimensions should be 192 × 192 or larger to display well on high pixel density devices.  
The URL for your site's icon must be hosted on an `https://` domain. If your site cannot serve `https://` images, we recommend using Imgur.

READ OUR DOCUMENTATION  
Selecting Icon URL

In the section « permissions prompt setup » click on « add a prompt »

ADD A PROMPT

PROMPTS

Every site must ask users for permission to send push notifications before being able to send them.

In this interface, you will be able to select the ways users are prompted for permission.

You may set up one or more different prompts across your site by selecting Add Another Prompt. You may only set up one prompt of each type.

SAVE

Then save the form at the bottom of the saved page, go to the « settings » tab of the menu at the top of the page

The screenshot shows the OneSignal dashboard interface. At the top, there is a navigation bar with the OneSignal logo and several tabs: 'SETTINGS' (which is highlighted), 'MESSAGES', 'USERS', and 'DELIVERY'. On the right side of the navigation bar, there is a 'MY APP NAME' label followed by a question mark icon and a user profile icon. Below the navigation bar, the main content area is titled 'Configure Web Push' with a code icon. Under this title, there is a section labeled '6 Upload Files'.

Clic on « Keys & IDs » (on the right)

Mobile Push Quickstart

Recover your identifiers:

**Keys & IDs**

**ONESIGNAL APP ID**

**REST API KEY**

**SECURITY**

You may disable your app to prevent new and scheduled notifications from being delivered. Apps you manually disable can be instantly re-enabled at any time.

**DISABLE APP**

**REST API KEY SECURITY**

**Important:** Treat your REST API key like a password and keep it private!

- Do not put it in your code for your app
- Do not share it on github or anywhere else online

The REST API key is solely for use with the OneSignal REST API .

**IF YOUR KEY IS COMPROMISED**

If your key is compromised, anyone will be able to send notifications from your app. If you believe your key has been compromised, reset your REST API key .
